Five Questions to Ask a Prospective EMS Partner

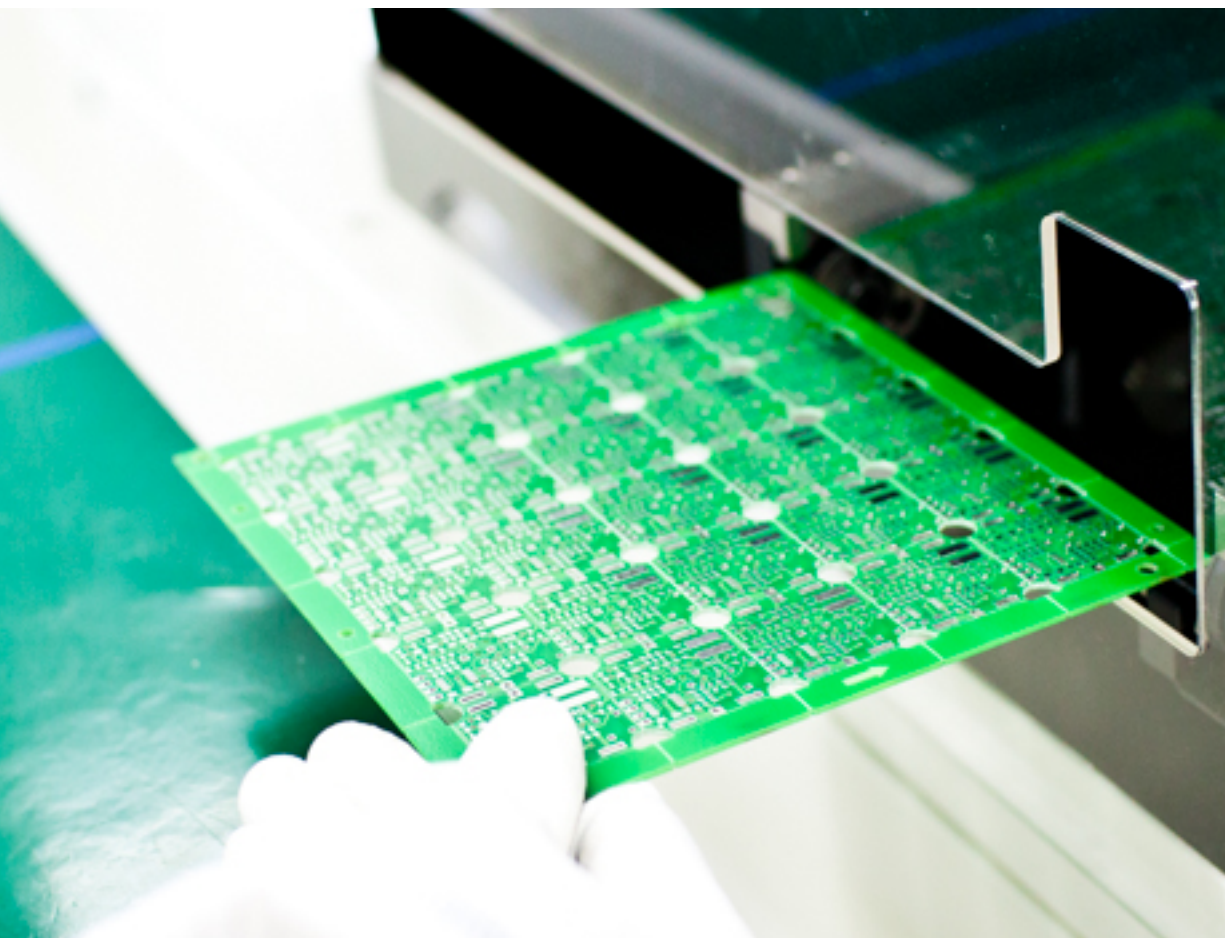

Looking for a new electronics manufacturing services (EMS) partner?
These are the most important questions to ask:

- Is your current line capable of handling the latest packaging configurations? (From the smallest to the most complex.)
- Does your EMS supplier source components through: OEM, Authorized Distribution Network, and/or Tier 1 Distributors?
- How do you protect against counterfeit components?
- How do you know you have supply chain redundancy?
- Are you sourcing components globally?

Your search to find the perfect partner will require time and research, but getting the answers to these questions will set you down the right path to ensure you're dealing with an EMS provider that understands the complexity of global manufacturing and a global supply chain.

If you think East West Manufacturing may be a good candidate for your electronics project, give us a call at: 404.268.8767.
